## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Takashi et al (JP 2003-151691).

Re claim 1, Takashi et al disclose a holding structure for an electronic part (5), including a first mold (20) which has a positioning shape portion for the electronic part, and a second mold (11) which is insert-molded so as to cover the first mold and the electronic part positioned with the first resin mold, characterized in that said positioning shape portion of said first resin mold is provided with a through hole (under terminal 2, 2a) for allowing an insert resin material to pass therein to form the second resin mold (Fig 1).

Re claim 2, wherein said positioning shape portion has a cup-shaped configuration in which the electronic part is adapted to be inserted (Fig 1).

Re claim 3, wherein said through hole is provided in a bottom wall of said positioning shape portion (Fig 1).

Re claim 4, wherein said through hole provided in said bottom wall of said positioning shape portion includes two through holes (Fig 1).

Re claim 5, wherein said through hole is provided in a side wall of said positioning

shape portion (Fig 1).

Re claim 6, wherein said through hole provided in said side wall of said positioning shape portion includes two through holes (Fig 1).

Re claim 7, wherein a gap is provided between an inner wall surface of said positioning shape portion with a cup-shaped configuration, in which the electronic part, is adapted to be inserted, and the electronic part (Fig 1).

Re claim 8, wherein said through hole guides said insert material to form said second mold into said positioning shape portion (Fig 1).

The teaching does not disclose the first and second mold made of resin. It would have been obvious to one having ordinary skill in the art at the time the invention was made to use for resin for the first and second molds of Takashi, since it has been held to be within the general skill of a worker in the art to select a known material on the basis of its suitability for the intended use as a matter of obvious design choice. In re Leshin, 125 USPQ 416.
